

Overview

Tablature is an open source randomization system for AI roleplays. It is versatile enough to handle traditional RPG rolls, introduce plot twists to a narrative, handle narrative pacing, simulate different outcomes, etc. The rules for it are simple: you have the AI pick 5 tags from a set that works with your roleplay, generate a possibility for each, and then determine the probability of that possibility happening. A 1d100 is then rolled to pick among these 5 possibilities, which the AI uses in its next response.

Requirements

For seamless and optimal use, you need, at minimum:

- A front end that can handle function calling or that has a code interpreter.
- A way for the AI to use that function calling to make a 1d100 roll throughout its output.

Master Prompt

The Tablature RP System

For every response, create a 1d100 roll table with 5 tagged possibilities for what should happen next, then write your response using that possibility.

Adhere to these guidelines for the roll table:

- Pick from 5 of the Tablature Tags that fit what might happen next in the current situation. Then, from each of these tags, brainstorm a possibility for each.
- Each possibility should be creative and interesting on their own, however, they can vary in their role: some should be what should logically happen next, some should be twists and complications that are thrown the PC's way, etc.
- Assign each of these possibilities a probability of it happening by assigning a roll range for each possibility. Do not have a uniform probability distribution, and instead logically assign each of these items a probability of happening. Expected items should have a much higher probability of happening than unexpected items, for example. Make sure these probabilities factor in player or NPC capabilities when applicable.
- After you've constructed the roll table, roll a 1d100 (using function calling). Then write your response following the roll as a guideline.
- Do NOT mix ideas from the roll table in the final output or the roll is useless.

Tablature Tag List:

[Insert list of tags that the AI makes use of]

Tablature Tags

Tags are a huge component of what makes Tablature work and be so versatile. Tag categories can range anything from mechanical success criteria (from critical failure to critical success), to plot devices (plot-twists, sudden reveal, etc) to more genre appropriate conventions (hot & cold

(romance), new scheme (political intrigue), etc) You can have more than one category listed for the AI to make use of throughout its narration, and even list instructions for when it should use each category of tags. You should feel free to make your own set of tags to tailor the experience to you, but here are some provided multi-purpose tags.

Generic:

Unexpected

Expected/logical

Breather

Defining Choice

Complication

Opportunity

Discovery

Natural Consequence

Interruption

Narrative:

Plot-twist

Character Deepening

Heartfelt Moment

Revelation

Resolution

Setup

Foreshadowing

Subverted expectation

Turning Point

Rising Tension
Falling Tension

Mechanical:
Success
Success with consequence
Costly Success
Partial-success
Critical Success
Critical Failure

Character Probability Factors

Because the AI will automatically assign probabilities to certain possibilities based on logic and its context, this means you don't need any defined numerical skills and can simply state what your character is good or bad at and the AI will naturally take that into account when assigning the probabilities. If you want a more codified system for stats, use a word-based scale/trait related to the skills or abilities you want. For example:

Trait Scale:
Weak
Below Average
Average
Above Average
Exceptional
Superhuman

Traits:
Strength
Agility
Endurance
Perception

Skill Scale:
Beginner
Novice
Practiced
Journeyman
Adept
Expert
Master

Skills:

Firearms

Hacking

Melee

Stealth

Persuasion

Streetwise

Tech (repair, electronics, cybernetics)

Vehicles

Medicine

Athletics

E.g. character sheet.

Strength: Above Average

Agility: Exceptional

Endurance: Below Average

Perception: Superhuman

Hacking: Adept

Firearms: Novice

Stealth: Journeyman

Streetwise: Practiced

Tech: Beginner

Now, whenever the AI encounters a situation where it requires your character to utilize one of these traits, the AI will naturally assign probabilities that correspond to them. These must be natural language descriptions of abilities that exist on a scale given to the AI beforehand. You can also add any auxiliary traits that would enhance the character in some way (such as a cyberpunk prosthetic, an enchanted item, etc) and either modify a character trait that way or simply let the AI take the enhancement into account.

Another option is that all character descriptions are free-form and purely narrative, the prompt should still allow for the AI to take those into account.
